Sec. Acc. Non-CPI :

N2000-423235

Title :

Two-dimensional high density damage tolerant printed code for encoding biometrics and text, uses Reed-Solomon error correction algorithm to compute error correction information in sub-units of encoded information

Abstract :
WO200051072 A
NOVELTY - An encoded user data portion is provided in which user data encoded in bit areas are printed or left blank. An error correction information comprising error correction code words is calculated on sub-units of information encoded in encoded user data portion using Reed-Solomon error correction algorithm or convolutional code.
DETAILED DESCRIPTION - Start and stop patterns (125,185) are provided to demarcate printed code (100) from adjacent blank zone surrounding the code during raster scanning. The patterns along with header sections (140,160) provide image information to facilitate decoding of printed code. An INDEPENDENT CLAIM is also included for positive off-line identity verification system.
USE - Two-dimensional high density damage tolerant printed code for encoding biometrics and text for off-line positive identity verification application of human being. Also, for storing finger print templates, photographic information and text.
ADVANTAGE - Decodes and encodes information in encoded user data portion of printed code effectively.
DESCRIPTION OF DRAWING(S) - The figure shows the exploded view of two-dimensional printed code.
Demarcate printed code 100
Start and stop patterns 125,185
Header sections 140,160(Dwg.2B/12)
